How to remove the extra "IN EFFECT" wording from extension headline
(September 15, 2004)

Headlines are now standardized, configured in template files, and in most cases (hydro, NPW, WSW) follow the WSW format example below. To stop the words "IN EFFECT" from being incorrectly placed in the extension headline edit the "hazard extension" section of each /awips/fxa/customFiles template file and add the "_ext" as shown in red below. This is corrected in OB4 and new templates will be provided. After this is done for every NPW & WSW product sites will need to run a WWA localization on every LX workstation.

```
^{hazard headline |
...WINTER STORM WARNING <PHRASE | warningAdvisory>...
}^

^{hazard continue |
...WINTER STORM WARNING < PHRASE | warningAdvisory>...
}!

!{hazard clear |
...WINTER STORM WARNING IS CANCELLED...
}!

!{hazard cancel |
...WINTER STORM WARNING IS CANCELLED...
}!

!{hazard expansion |
...WINTER STORM WARNING <PHRASE | warningAdvisory>...
}!

!{hazard extension |
...WINTER STORM WARNING EXTENDED <PHRASE | warningAdvisory_ext>...
}!
```

<u>Steps to run WWA localization</u>:

1. Open an xterm window on any linux workstation.

2. Login as user fxa:
   su -l fxa
   <enter fxa password when prompted>

3. Run WWA localization by typing:
   /awips/fxa/data/localization/scripts/mainScript.csh -WWA

4. Exit fxa login session, and xterm window by typing:
   exit
   exit

5. Repeat steps 1 through 4 for <u>every other linux workstation</u>.
